

FAQ

How long does the assessment take?

The initial New Patient Exam and Consultation is approximately 45 minutes. Follow-up exams are 15-20 minutes.

How does the assessment work?

The new patient consult and exam includes a discussion of your medical history and current symptoms. Our paperwork is detailed so please have it completed before your appointment.

What is the average length of a treatment plan?

The goal of the treatment plan is to eliminate symptoms as quickly as possible by balancing multiple body systems. Maintaining balance over time is what allows for the healing process to occur. 6 to 18 months is the average time span for chronic conditions to resolve or become manageable with a small ongoing supplement protocol.

How long until I experience health changes?

Days, weeks or months depending upon how complex your health condition is. The system we use has a unique way for measuring vital energy (vitality) that tracks response to treatment.

**IT'S TIME TO
BETTER
UNDERSTAND
YOUR HEALTH**

**LEARN HOW WE CAN MEASURE AND
SUPPORT THE NUTRITIONAL NEEDS OF
YOUR BODY BY USING ABEA TO CONNECT
THE DOTS.**

ABOUT YOUR TREATMENT PROGRAM

Your Assessment:

The exam is non-invasive, quick, reliable, and cost-effective. Standard muscle testing using energetic and nutrient vials, & a scan with the Bio-Well device, is performed.

Nutrient Recommendations:

You will see the impact of supplement recommendations during your visit! You will leave with an individualized plan and diet recommendations based upon your food sensitivities.

Follow-Up Assessments:

Regaining and maintaining your health is a process. You will require ongoing exams to fine tune and advance your treatment protocol as necessary to achieve your health goals. Exams will be 2 to 3 weeks apart initially and become less frequent as you improve.

CONNECT THE DOTS, UNDERSTAND YOUR BODY

What is Applied Bio-Energy Analysis?

Applied Bio-Energy Analysis (or abea) uses electronically imprinted vials organized in kits to help understand if the major organs and tissues of the body are maintaining their vital energy.

If we start to lose the ability to maintain an electrical charge in an organ, then other organs in the system will compensate and an overall loss of energy and vitality will ensue.

Returning balance to the system creates homeostasis. When homeostasis (balance) returns, then your symptoms will disappear.

We use the kits and technique to better understand how the body is compensating, prioritize your program, and track changes and progress from visit to visit.

What is the Bio-Well Device?

In conjunction with the imprinted vials, we use a specialized device known as the Bio-Well which utilizes gas discharge visualization (GDV) to measure the overall state of a person's energy field. The images created are based on the combination of Traditional Chinese and Ayurvedic Medicine, with the conventional Western science of organs and organ systems.

People are conductors of electricity. Depending upon one's mental and emotional state, as well as on the biochemical processes taking place in the body, different quantities of electrons are discharged, releasing light whose intensity is measured by the Bio-Well camera. The parameters measured include: stress, energy and balance/imbalance of the whole body.

Let Dr. Stewart help you understand your health concerns and work with you to create a treatment plan that improves your health.
